idx Extension Kit

Simplify Data Management and Enhance Efficiency

With a range of powerful features designed to streamline data management processes and optimize productivity, the IDX Extension Kit empowers users to extract valuable information, automate tasks, and synchronize user and group data effortlessly.

Conditional Permissions
- Enables the application of permissions from "Access Control Lists" in M-Files according to specific conditions.
- Adds a new level of flexibility to the application of even the most complex authorizations.

Group Members & Person Object Synchronization
- Dynamic association of M-Files users with groups directly in the customer interface client interface via "objects
- Allows members of user groups to be added or removed directly or indirectly, as required

Document Fetcher
- Extracts documents from an external online source
- Automatically download the document with a defined periodicity
- Metadata is filled in according to the defined in the module

User & Person Object Synchronization
Allows users to be automatically associated with an object representing people in M-Files.

Aggregate Properties
- Works like automatic properties in M-Files with many more features
- Reduces the time and effort required to develop scripts
- Enables automatic mathematical calculations to be made from "source" properties to update a "target" property, such as :
  - Average
  - Maximum value
  - Minimum
  - Sum
  - Count
  - Standard deviation
  - Etc.

EXIF Reader
- Update M-Files metadata from image properties
- Capture GPS data in images converted to metadata:
  - GPS Altitude
  - GPS Latitude
  - GPS Longitude
  - Etc.
