idx Search Matcher

Enhance object associations and document management

The IDX Search Matcher module provides advanced relationship building capabilities within the M-Files Platform. This module can be used to automate the association of objects from different objects types within M-Files using predefined easily configurable filters.

## Take advantages of seamless relationship building

With dynamic search filters, administrators can assign documents to other non-document objects. A user-friendly interface enables the creation and modification of search conditions for optimal customization.

Flexibility and dynamic updates

• Easily modify and update search conditions based on evolving organizational needs.
• Resulting impacts include prompt creation or removal of relationships according to configured conditions.

Scheduled execution

• Operates on a schedule for consistent and reliable application of automated associations.
• Configurable within the M-Files administrator tool, ensuring timely execution and overall enhanced efficiency.
