DocumentHub

STORAGE IT

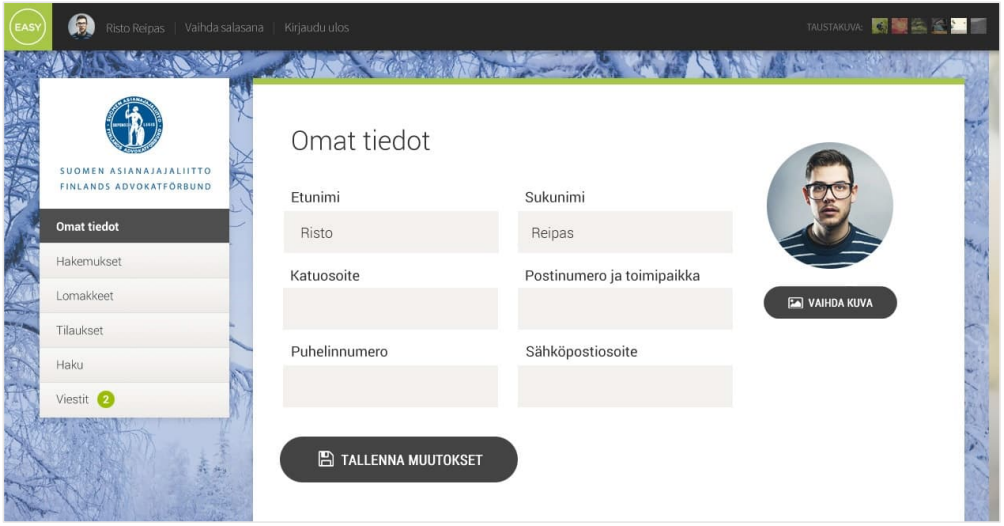
DocumentHub

The DocumentHub for M-Files offers a modern solution for electrifying and boosting the efficiency of communication with stakeholders and customers. The portal can be used to relay information and documents between stakeholder groups. User and user-group-specific views can be customized to include user interfaces designed for specific needs.

The DocumentHub features genuine integration with the **M-Files** document management and ERP system. This ensures that information can be relayed between the back-end system and the Service Portal in real time.

The DocumentHub is based on modern web and mobile technologies, which allows for tidy and elegant user interfaces that also work excellently on smartphones due to the responsive design.

The solution also comprises a fully independent user account creation tool. Access right management can be implemented by the user of the portal, and various automation options are available, as necessary.



DocumentHub

Genuine integration with the M-Files system

- Real-time two-way communication with the back-end system
- The portal allows you to transfer information pertaining to all M-Files objects, such as documents, users, projects, and other registers, notifications, and workflows.
- Documents can also be uploaded to M-Files through the Service Portal.
- Metadata can be configured based on the customer's specific needs.
- Various fields can be configured for user input, which is then transferred to M-Files as metadata.

Inhouse user management

- User management by the Customer
- AD/M-Files access rights / user groups are available for utilization
- Application-specific access rights
- User management is carried out through the M-Files repository of the Customer. While portal users are typically linked to Contact Person objects, any object type for which an e-mail field has been configured can be converted to be used for the creation of portal users.
- Access rights can be fully configured by the customer. For example, a user may be allowed to access certain files on a Customer-specific basis or files for projects where they are mentioned in the metadata. The user may also be shown assignments once a specific work status has been specified for them.

Authentication (option)

- Two-factor authentication
- Unique SMS codes used for identification
- https://cloud.google.com/identity-platform/pricing#for_phone_authentication_and_multi-factor_authentication

DocumentHub

Customizable user interfaces

- Various user interfaces (portal application) can be customized for the portal based fully on individual needs
- Access rights to user interfaces can be configured in a user or user-group-specific manner

Responsive web interface

- Works perfectly on smartphone browsers as well

DocumentHub

Service fee

Number of user accounts	€/month	Unit price	
10	60.00	6.00	€/acct.
25	125.00	5.00	€/acct.
